RE: Site Visit, Arthur Concentrator, Bingham Pit, Kennecott Minerals Company,
M/035/002, Salt Lake County, Utah

On January 19, 1990, Wayne Hedberg, Tony Gallegos, and I visited Kennecott's Arthur Concentrator site. We were accompanied on our inspection by Mr. Bart Kale and Mr. Steve Matern of Kennecott.

The visit was performed to observe and evaluate the ongoing demolition and reclamation of the Arthur site. The majority of the Arthur facilities will be removed leaving: the administration building, the maintenance shops, the carpenter shop, the machine shop, warehouse, and the pattern shop.

The company, under the direction of Mr. Matern, is currently performing an inventory and isolating all hazardous or questionable materials found at the site. Such materials include: waste oil and grease, paints, chemicals, and contaminated soils found at the site. Kennecott has contracted with JBR consultants to perform the identification, categorization, and labeling of all such materials at the site. 50 gallon drums and 5 gallon sized cans have been collected at various locations across this site for evaluation of contents and eventual disposal.

Mr. Matern indicated that all PCB containing electrical equipment has been listed and labeled. Also, all soil contaminated with waste oil will be removed from the site.

Mr. Kale indicated that the timeframe for completing reclamation at this site encompasses 1 year to 1.5 years. He and Mr. Matern emphasized that no reclamation would commence until the site had been completely inventoried for hazardous materials and that these materials had been removed from the site according to EPA specifications.

Mr. Kale indicated that JBR Consultants will be developing the reclamation plan for the Arthur site, which will be made available to the Division for review when ready.
